Why this topic

Bitmap and Window Related

How expensive?

Pre-scaling is easy

```
// Rescales originalImage to the size of view using  
// bitmap filtering for better results  
originalImage = Bitmap.createScaledBitmap(  
    originalImage, // bitmap to resize  
    view.getWidth(), // new width  
    view.getHeight(), // new height  
    true); // bilinear filtering
```

In Gingerbread...

- All windows are 32 bits
 - Transparent: RGBA_8888
 - Opaque: RGBX_8888
- OpenGL surfaces are 16 bits
- All bitmaps loaded in 32 bits (ARGB_8888)
- For quality reasons
 - No more banding, no more dithering

Performance

	16 bits	16 bits dithered	32 bits
ARGB_8888	6.0 ms	7.5 ms	2.0 ms
ARGB_4444	4.0 ms	5.0 ms	3.5 ms
RGB_565	0.5 ms	0.5 ms	6.0 ms

Performance measured with HVGA 2.2 emulator

Window backgrounds

- Sometimes unnecessary
 - Top-level opaque view
 - `layout_width=fill_parent`
 - `layout_height=fill_parent`
- Expensive to draw
- Dumb rendering engine

Removing the background

```
<!-- res/values/styles.xml -->
<resources>
    <style name="Theme.NoBackground" parent="android:Theme">
        <item name="android:windowBackground">@null</item>
    </style>
</resources>
```

What do I get?

Redraw efficiently

- invalidate()
 - So easy
 - So expensive
- Dirty regions
 - invalidate(Rect)
 - invalidate(left, top, right, bottom)
 - Rect.union()----Launcher

Just do it

GridLayout

Example Dialog

Email Setup

You can configure email in just a few steps:

Email address:

Password:

Garbage Zero

Hardware Acceleration & Layers

android:targetSdkVersion="14"

```
1 <uses-sdk android:targetSdkVersion="14">
2 <application>
3 <activity ... />
4 <activity android:hardwareAccelerated="false" />
5 </application>
```

View.setLayerType(int type, Paint p)

- view.setLayerType(View.LAYER_TYPE_NONE, null)
- view.setLayerType(View.LAYER_TYPE_SOFTWARE, null)-----setWillNotDraw()
- view.setLayerType(View.LAYER_TYPE_HARDWARE, null)

Drawing a ListView			
	Hardware layer	DisplayList	Software
Time in ms	0.009	2.1	10.3

```
view.setLayerType(View.LAYER_TYPE_HARDWARE, null);
view.animate().rotationY(180);
animator.addListener(new AnimatorListenerAdapter() {
    @Override
    public void onAnimationEnd(Animator animation) {
        view.setLayerType(View.LAYER_TYPE_NONE, null);
    }
});
animator.start();
```

Profiling

- Systrace
- TraceView-----method calling
- HierarchyViewer
-

OverDraw

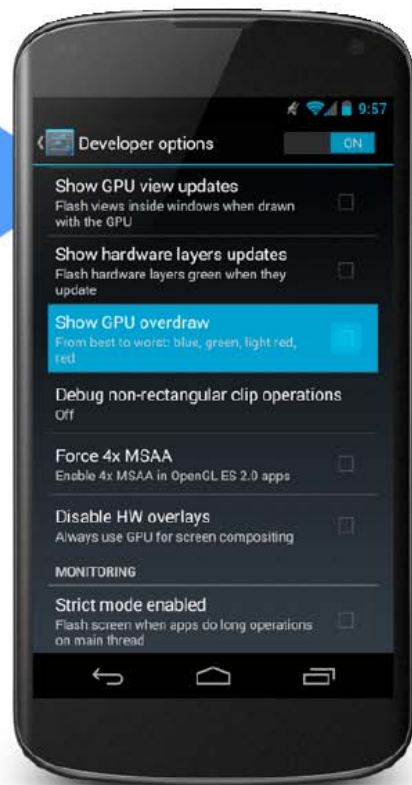

Overdraw

Blue 1x

Green 2x

Red 3x

Deep Red 4x

Tips & tricks

- Avoid layouts
- Layers
- Less ViewTreeObserver
- `canvas.saveLayer(x, y, width, height,Canvas.CLIP_TO_LAYER_SAVE_FLAG);`
- Don't use too many views
- Be careful of `setAlpha()`
- Reuse rendering objects
- Don't modify Bitmaps often
- Don't modify Paths often
- Avoid overdraw
- Profile(tools)

Thanks!
